BUL ARMORY

ANNOUNCING ITS PRESENCE WITH AUTHORITY

A quick look at the front cover of this publication will clearly show that BUL Armory is bringing some very good-looking guns to market for USPSA competitors. The Israeli-based BUL Armory has been around since 1990, but is now focused on making a push to fill a void in Open and Limited divisions of USPSA. The timing seems about perfect, with other manufacturers changing their focus away from competition guns, especially Open guns. BUL is making guns for several USPSA Divisions, but the first ones that we will be doing a more in-depth and long-term review on are the SAS II for Open and the SAS model for Limited. The guns are just now starting to arrive and we received these a little too late in the cycle for a full review for this issue, but they will be getting the proper trigger time and full review in future articles.

My daughter Alyssa and I fired some rounds through each of these guns at Parabellum's indoor range just to get acquainted with them. The Open gun fit my hands very well, and was comfortable

to hold and soft shooting. The gun and dot were both very accurate at 25 yards. The two guns were still cold to the touch from being shipped during the coldest part of the winter in this area, before the gun was loaded and the slide was racked vigorously about 30 times, and a few drops of oil were added in a couple of places, and the slide was racked some more. It was nice to discover that I can work on Open guns.

I should also mention that I was just running factory 115gr ammo through the gun. It was not 9mm major ammo or anything close to that type; Jake has acquired several thousand rounds of Everglades 9mm major and the new Eley 9mm major ammo to test in this gun.

The SAS Limited gun received zero oil or attention and ran like a sewing machine the whole time. We fired 205gr 40s&w Federal Syntech rounds through the gun, and the accuracy from seven to 25 yards was great. Pastors could be hit at seven yards with regularity, and the A-zone was hit repeatedly at 25 yards. The sweet trigger and superb accuracy were the

things that were most noticeable from this first session.

Over the last several years of doing reviews you can find yourself not getting overly excited about “new” guns. However, I am really looking forward to shooting both of these guns at length and providing a full report in the next issue or perhaps two issues. We will be giving these two a heavy workout over the next several weeks of shooting drills and matches with them, testing the ammo, the guns and the rig provided by DAA for the review - so stay tuned. For a full list of features and models offered by BUL Armory, check out gparms.com. ■

Products for Shooting, Reloading & Competitive Marksmen

Port-A-Stand™ 'C'

Portable Target Stand

- Simple
 - No Parts to Lose
